

3 things you need to know to survive a tsunami

1 WHEN TO EVACUATE

The first tsunami warning is an earthquake

A tsunami could arrive 50 minutes after a major earthquake. Don't wait for an official warning to evacuate.

2 WHERE TO EVACUATE

Inland or high ground

Use the map on the other side of this flyer to plan your escape route. Regularly review and test out your evacuation route as routes will change over time. Make sure you have a plan B – following a big earthquake, routes may be blocked.

Think about your plan during the day. Will you be at work, school etc?

3 HOW TO EVACUATE

Use your feet

In a big tsunami emergency there will be crippling traffic jams. Most people should be able to walk to a safe area or safe location shown on the map within 40 minutes.

With only 50 minutes, emergency services will not be able to get you out in time. Make a plan with your neighbours, especially if you know they will need assistance getting to safety.

Tsunami can arrive in several waves over a long period of time. That is why you need an emergency pack. You must be prepared to wait for many hours before the water subsides.

Tsunami warning signs

- Any earthquake that lasts **LONGER** than a minute.
- A big earthquake that is **STRONG** enough to knock you off your feet.
- Strange ocean behaviour: loud or strange noises, sudden changes in sea level or ocean drawing away from the shore.

*If the earthquake is **LONG** or **STRONG**, you need to be **GONE**.*

Tsunami evacuation zones

Red zone – You should always evacuate the red zone if there is any sort of tsunami warning, even if it is just a text from your friends.

Orange zone – In a formal evacuation for a tsunami that is more than 2 hours away, Civil Defence may ask you to move from the orange zone into the yellow zone.

Yellow zone – A devastating local source tsunami will probably flood the yellow zone. There will be no time for official warnings. After a major earthquake it will take about 50 minutes for this tsunami to reach the coast, plus another 30 minutes to flood the yellow zone.
