17 June 2015

For the attention of [REDACTED] s 7(2)(f)(ii)

Dear [REDACTED] s 7(2)(f)(ii)

Mauao Slopes; Monitoring Report for June 2015

This letter is to report on survey benchmark monitoring in June 2015 and the site geotechnical walkover on 15 April 2015.

A) Work items completed at this monitoring included:

- Discuss developments with Ranger.
- Walkover reviewing slopes from all tracks. Spring flows, slip movements, rockfall evidence, vegetation development etc. Recorded and photograph.
- Laser EDM survey carried out at 6 benchmark group locations on; West, North, East Bluffs and Zone 6.
- Sets of photos from locations A to M around summit for scour & rockfall monitoring.
- Check previous soil slip sites for re-vegetation, stability and tension crack development.

B) Summary of findings:

- No significant rockfall or slip events have been reported to the Ranger's staff since the previous monitoring.
- No significant movement was measured on the benchmark surveyed bluffs.

B) Comments

As part of this monitoring we spent desk time graphically plotting each leg of the survey data over the previous 12 years to give a clear visual check which re-confirmed that there has been very little large scale movement within the bluffs being monitored.

The walkover found a few location which indicate some of the ongoing rockfall:

Photograph #1. "Hole" in soil indicating boulder released over Oruahine track.

Photograph #2. "Fresh" looking boulder on lower slopes. View in Photo #3, below, is looking up from this location

Photograph #3. Boulder of Photo #2 is in lower left foreground.

Photograph #4. Small fresh looking rock on lower slopes.

Photograph #5. Small fresh looking rock on lower slopes.

Photograph #6. Small fresh looking rock on lower slopes.

The survey and monitoring walkover are generating many many more photographs than are presented in each report and after each visit these are archived and cross referenced as part of the analysis before presenting these reports. Typically this analysis work takes a day or more of office time but sometimes, as was the case with the recent set, there are few obvious or significant changes found.

With your agreement, as part of the next monitoring visit we would like to propose that we increase the quality of the data by including some UAV aerial photography of the upper bluffs in elevation view and the lower slopes in plan view. Avalon has started successfully trialling this technique on some other sites and it is proving very useful. Any such work at Mauao would be at very low level but of course still coordinated with ATC at the Airport.

Attached to this report are our survey benchmark measurements.

Our next programmed monitoring will be due in November/December and I will contact you shortly before if we haven't heard from you and look forward to discussing the UAV photography proposal.

If you have any queries or there are any developments in the meantime please don't hesitate to contact me at any time.

Regards
